Jimmy Passeti

Retornar URL do servidor

```
Xrm.Utility.getGlobalContext().getClientUrl();
```

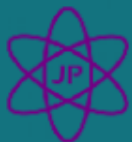

Retornar o GUID do usuário atual (logado)

```
Xrm.Utility.getGlobalContext().getUserId();
```

Retornar GUID de um campo consulta (Lookup)

```
formContext = executionContext.getFormContext();  
  
formContext.getAttribute  
("nomedocampo").getValue()[0].id;
```

Esconder campo

```
formContext = executionContext.getFormContext();  
    formContext.getControl  
    ("NomeDoCampo").setVisible(false);
```

Exibir campo

```
formContext = executionContext.getFormContext();  
    formContext.getControl  
    ("NomeDoCampo").setVisible(true);
```

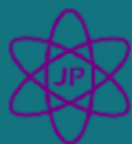

Retornar valor de campo tipo picklist

```
formContext = executionContext.getFormContext();  
formContext.getControl("NomeDoCampo")  
    .getSelectedOption().value;
```

Retornar valor de campo tipo picklist

```
formContext = executionContext.getFormContext();  
formContext.getControl("NomeDoCampo")  
    .getSelectedOption().text;
```

Desabilitar campo

```
formContext = executionContext.getFormContext();  
    formContext.getControl  
    ("NomeDoCampo").setDisabled(true);
```

Habilitar campo

```
formContext = executionContext.getFormContext();  
    formContext.getControl  
    ("NomeDoCampo").setDisabled(false);
```

Remover obrigatoriedade

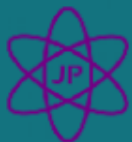

```
formContext = executionContext.getFormContext();  
formContext.getAttribute("NomeDoCampo")  
    .setRequiredLevel("none");
```

Tornar campo obrigatório

```
formContext = executionContext.getFormContext();  
formContext.getAttribute("NomeDoCampo")  
    .setRequiredLevel("required");
```

Tornar campo recomendado

```
formContext = executionContext.getFormContext();  
formContext.getAttribute("NomeDoCampo")  
    .setRequiredLevel("recommended");
```

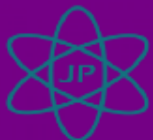

Esconder uma seção

```
formContext = executionContext.getFormContext();  
    formContext.ui.tabs.get("tabName")  
.sections.get("sectionName").setVisible(false);
```

Exibir uma seção

```
formContext = executionContext.getFormContext();  
    formContext.ui.tabs.get("tabName")  
.sections.get("sectionName").setVisible(true);
```

Salvar o formulário

```
formContext = executionContext.getFormContext();  
formContext.data.entity.save();
```

Salvar e Novo

```
formContext = executionContext.getFormContext();  
formContext.data.entity.save("saveandnew");
```

Salvar e fechar

```
formContext = executionContext.getFormContext();  
formContext.data.entity.save("saveandclose");
```
